GUIDE 0.50-SE piecewise simple linear least-squares regression tree for predicting `mean`. At each split, an observation goes to the left branch if and only if the condition is satisfied. Sample sizes (*in italics*), means of `mean`, and signs and names of regressor variables are printed below nodes. Nodes with significantly negative, zero, and positive slopes are colored red, yellow, and green, respectively. Second best split variable (based on curvature test) at root node is `f1`.
